

Business Problem Statement

Business Problem Statement

- Movie production involves substantial investments, but financial success varies widely across films. Stakeholders need to understand how budget, language, industry, and audience ratings influence revenue and profitability. This project analyzes movie industry data to identify key performance drivers and provide insights that support data-driven investment and business decisions.

Business Objective

- To analyze movie industry performance by evaluating revenue, budget, IMDb ratings, language, and industry trends in order to identify the factors that drive commercial success and improve strategic decision-making.

Business Questions Answered

- Which movie industry generates the highest revenue?
- Does a higher production budget lead to greater revenue?
- Which language contributes the most to revenue?
- Which movies deliver the highest financial returns?
- What is the overall Return on Investment (ROI) across movies?
- How do IMDb ratings compare across different languages?
- Which factors have the greatest impact on a movie's commercial success?
